

Recapping Data Protection in the Department of Mysteries

- **Prophecies made to an individual, stored mentally.**
 - Not PD (purely personal [art 2(2)(c)]/not filing system)
- **Memory distilled into a sphere for archiving in the public sector (the Department of Mysteries).**
 - Part of a filing system; PD [art 2(1)]
 - Likely substantial public interest grounds [art 9(2)(g)]
 - Archiving; some rights might not apply [art 17(3)(d)]
- **Sphere protected by access controls: only those the prophecy concerns can retrieve it; others go mad.**
 - [limited] data protection by design [art 25]
 - Subject access request [art 15]
 - Breach notification after Battle of Department of Mysteries (?)

Where does this leave us?

- Many more citizen controllers as self-tracking starts to look outwards.
- Individuals expected to follow rules made with **orgs in mind** (including security!).
- Increasingly tough *Ryneš* style questions about admissibility of evidence.
- BCIs designed for user interfaces might need **careful Privacy-by-Design considerations**. At the moment, the question rarely comes up in hospitals.
- Possibly the **worst idea since the IoT**.
